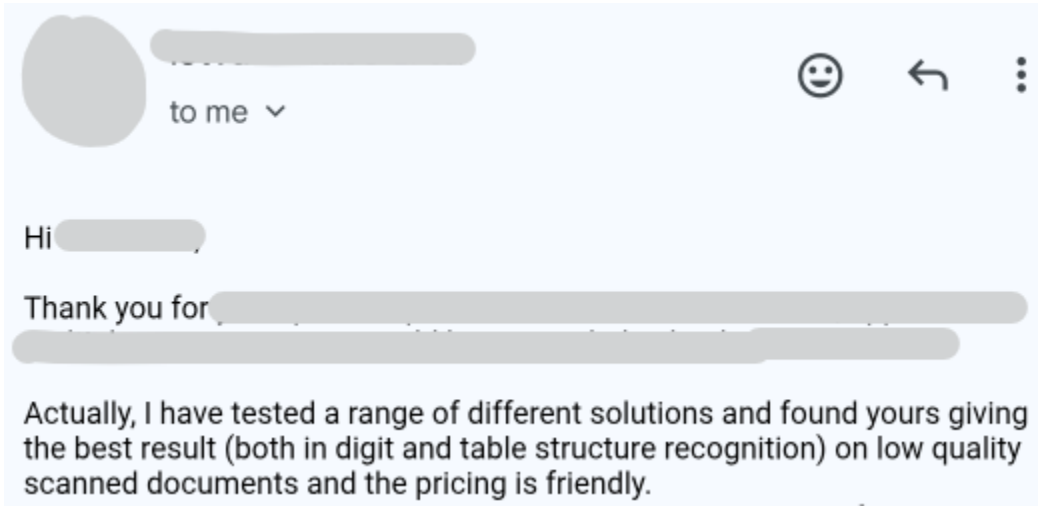
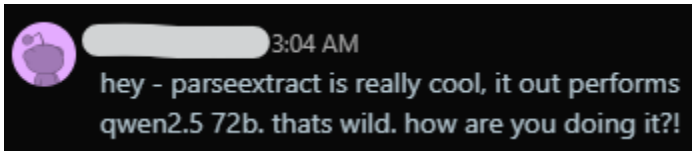
OP • 9m ago
Your project/product looks really cool.
It's performing as well as really expensive parsers so that's neat.



to me
Hi
Thank you for
Actually, I have tested a range of different solutions and found yours giving the best result (both in digit and table structure recognition) on low quality scanned documents and the pricing is friendly.



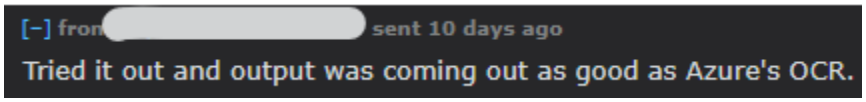
3:04 AM
hey - parseextract is really cool, it out performs qwen2.5 72b. thats wild. how are you doing it?!

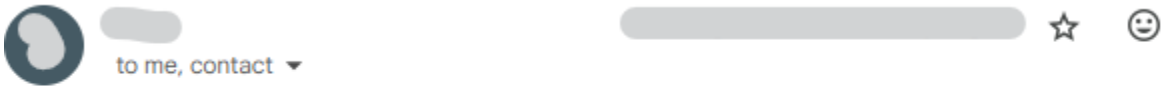
---

to me, contact
Just told an friend of mine about this. He's interested. I'll refer him to you guys

---

When extracting many pages at once, this is certainly a time saver. Thank you for your hard work on this, I can see myself using this for the foreseeable future.

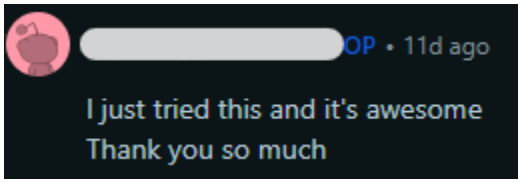


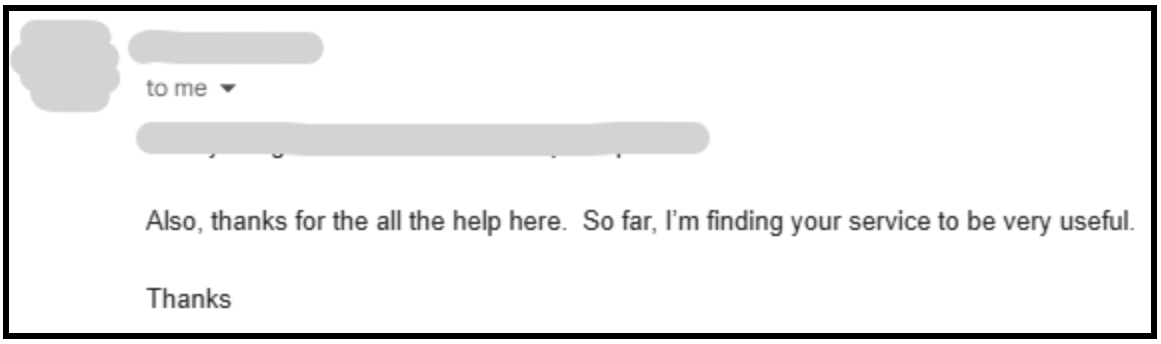


to me, contact

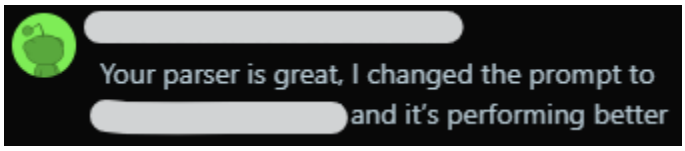
Hi ParseExtract Support Team,

I'm a big fan of the service. It is exactly what I needed for my project and I stumbled upon it.





to me
Also, thanks for the all the help here. So far, I'm finding your service to be very useful.
Thanks



Your parser is great, I changed the prompt to
and it's performing better

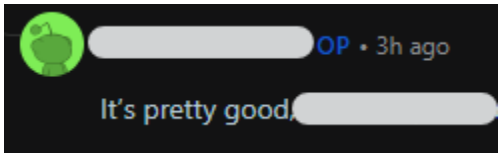
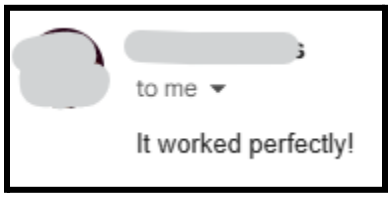
I like this one. It gave a separate sheet for credits and debits.
at a penny per page, I am definitely looking to make this one work.



OP • 3h ago
It's pretty good,



to me
It worked perfectly!

to contact

Hello,

I have an account with you, and I am working on a webapp that already uses your services for data extraction from photos of receipts.

I can say that I am so far very impressed, as I have wasted so much time with alternatives!

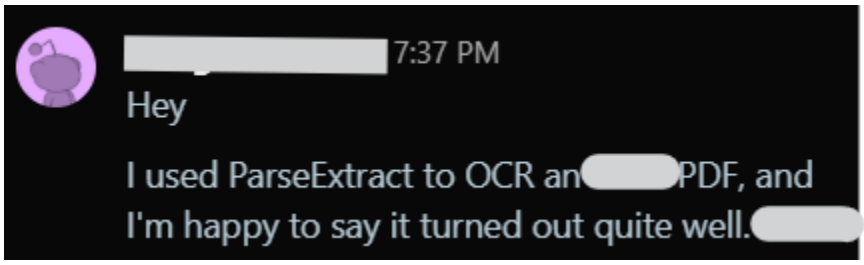
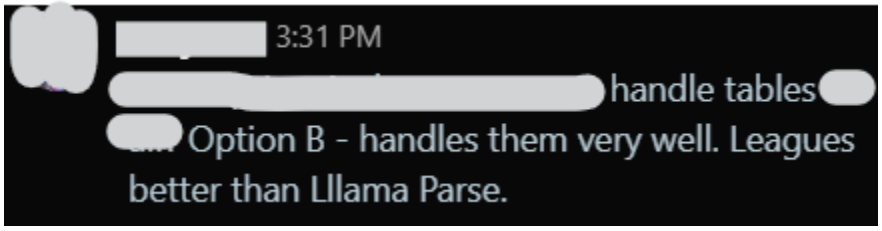
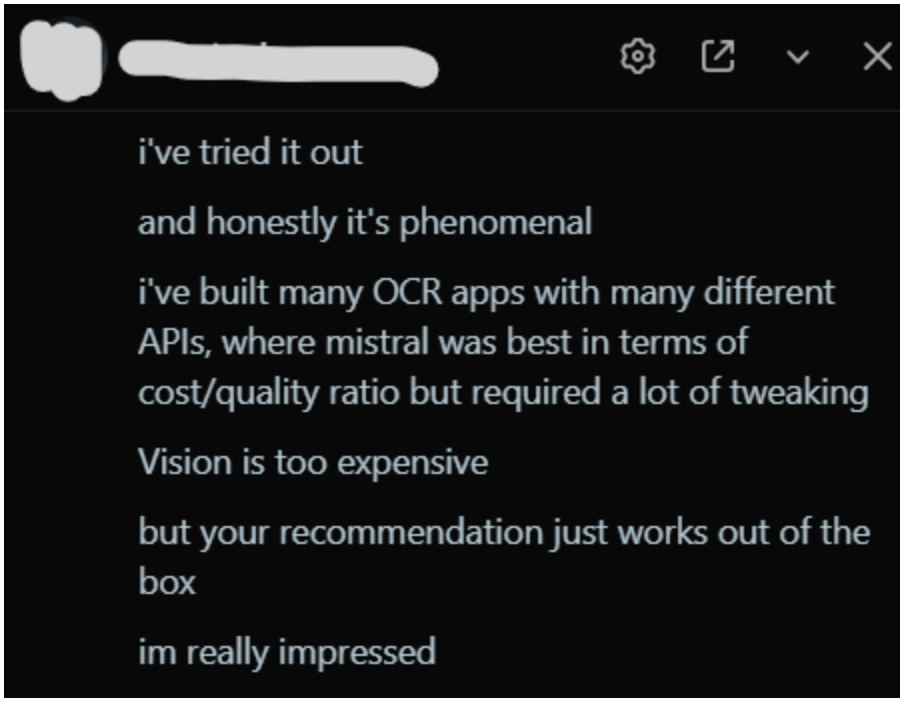
Hi,

i like what parseextract does and it's affordable solutions.







i've tried it out
and honestly it's phenomenal
i've built many OCR apps with many different APIs, where mistral was best in terms of cost/quality ratio but required a lot of tweaking
Vision is too expensive
but your recommendation just works out of the box
im really impressed
